

CONGRATULATIONS

COLLIN WILLEY

The answer to the last question was:

When choosing a ladder that will support the correct amount of weight which of the following is the correct formula you should use?

- 1) Maximum Employee Height + Tools/Equipment/Supplies = Maximum intended load
- 2) Maximum Employee Health + Tools/Equipment/Supplies = Maximum Intended load
- 3) Maximum Employee Weight + Tools/Environment/Supplies = Maximum intended load

4) Maximum Employee Weight + Tools/Equipment Supplies = Maximum intended load

REMEMBER: In order for a drawing to occur 10 individuals must participate by sending Heidi their answer. The question will not change until we have 10 participates and draw a winner. Each individual may only answer once.

SAFETY QUIZ:

Which method is better for your back; Pushing a cart or Pulling a cart?

Send your answer to Heidi by email at: heidis@deltafire.com

or via text at: 971-235-0112
